*All costs are approximate and based on OA ITSD standard configuration, software and support. Total Annual cost includes the annualized one-time cost for comparison of total cost of ownership.

** VDI is typically recommended only when the user is using a person device to connect.

***Various mobile plans are available. This cost represents an unlimited bundle plan based on the assumption that a remote worker would only require a State issued cell phone if they have a need to use the phone for calls throughout the day in which case an unlimited plan would be recommended. This is a high end plan and other plans would be less expensive if they would meet the user's needs. Options such as a softphone and headset should be considered for remote workers first.

****Printer cost does not include consumables such as ink and paper
